

Seasearch is.....

- A project for recreational divers to collect information about habitats, plants and animals that only divers can see.
- Seasearch records all get verified and entered into Marine Recorder.
- Records are freely available to all via the National Biodiversity Network website.
- Written reports can be downloaded from the Seasearch website.
- Seasearch divers are all volunteers, many are marine biologists and between them have years of underwater experience.

exploring the undersea world

Seasearch

- Runs various training courses and workshops with follow-up dives to teach survey techniques and marine identification.

exploring the undersea world

Seasearch
